

Oral-Temp CAD/CAM Provisionals

4 Day Turn-Around

Oral-Temp provisionals from Oral Arts are a highly esthetic solution for your provisional needs. Oral-Temps are fabricated using state-of-the-art CAD/CAM technology. We prep your pre-operative model, scan using laser technology, design your temporary bridge with ideal contour, contacts, and occlusion. Our CAD/CAM process delivers a very dense temporary that eliminates pitting or porosity associated with other layered or flowable techniques. When you receive your case simply reline the Oral-Temps chair-side for an esthetic long-term provisional option.
