

## CHOOSE WHAT IS RIGHT FOR YOU.

Remember, the main advantages to wearing dentures are to limit your struggles with eating and speaking, but also provide you with a natural look and fit.

If natural looking and metal-free dentures are important to you, ask your dentist if Ultaire™ AKP removable partial denture frames are right for you.

## SOLVAY DENTAL 360™

Solvay Dental 360™ is part of Solvay Group, a 150-year-old global chemical and advanced materials company. As a leading supplier of advanced materials to the healthcare industry for more than a quarter century, the company has put their scientific know-how to the test to deliver materials used to fulfill unmet patient needs.

## Need Removable Partial Dentures?

### You Have Options

## Ultaire™ AKP

Natural Looking & Metal-Free  
Removable Partial Denture Frames

## REMOVABLE PARTIAL DENTURES

Missing teeth can compromise your ability to eat, speak, smile and your overall health and physical appearance. Therefore, it is important to restore these missing teeth. One proven solution that your dentist may prescribe is a removable partial denture.

Ultaire™ AKP Frame

Removable partial dentures fill in the gaps where you have missing teeth. They are constructed from either a metal or metal-free frame, which then holds artificial teeth. **Patients should consult with their dentist and give careful consideration to select the right material for construction of their removable partial denture.**

## METAL FRAMES

Removable partial denture frames are typically constructed of metal alloys. The frame utilizes metal clasps or supports that secure to existing teeth and ultimately hold the dentures in place.

**While a viable restoration option, patients with metal frames may experience:**

- Metallic taste in mouth
- Compromised speech from frame thickness
- Visible metal - seen while smiling or speaking
- Metal sensitivity
- Discomfort from weight of metal frame

## METAL-FREE FRAMES

Both existing patients and new removable partial denture candidates have metal-free options. Patients looking for more than what a metal frame has to offer can opt for a biocompatible frame made with Ultaire™ AKP high performance polymer. Ultaire™ AKP was designed by Solvay Dental 360™ specifically for patients looking for a higher degree of satisfaction when wearing their removable partial dentures.

**Frames made from Ultaire™ AKP offer patients:**

- A lightweight and biocompatible frame
- Bone-like properties, which may improve overall fit and limit future bone loss
- No metallic taste
- An aesthetically superior option with no visible metal
